TITLE:

On Some Controversial Problems of Geological History and Rock Classification in Engineering Geology (O nekotorykh apornykh voprosakh geologicheskoy istorii i podrazdeleniy porod v inzhenernoy geologii)

PERIODICAL:

Byulleten' Moskovskogo Obshchestva Ispytateley Prirody, Otdel Geologicheskiy, 1957, # 6, pp 147-148 (USSR)

ABSTRACT:

The author discusses some problems of surface sediment origination and changes in climate. His conclusion is that climate plays a decisive role in the formation of surface sediments. A definite combination of genetic types of sediments and relief shapes, a definite mineralo-petrographic composition, and definite physico-mechanical properties characterize each formation of sediments: glacial, periglacial, and alluvial (pre-glacial and post-glacial).

The groups of grounds with similar engineering-geological properties nust be classified on the basis of the study

of their formation and facial peculiarities.

TITLE: Standard subprograms for computing elementary functions to four decimal

places

CITED SOURCE: Tr. Vy*chiel. teentra. Tertusk. un-t, vy*p. 3, 1963, 3-28

TOPIC TAGS: elementary function, standard computer program, automatic computation, automatic programming, decimal to binary conversion, binary to decimal conversion

TRANSLATION: A number of stendard programs are proposed for computing elementary functions with an accuracy of 5 X 10⁻⁵. Taylor series expansions or approximations of Chaby*shev polynomials are used. All programs work with a fixed decimal and satisfy the requirements of the compiling program. The programs introduced into the machine by use of the compiling program with an initial start are described in detail. As examples of programs of the first type, programs are described for converting a number from decimal to binary systems and from binary Card 1/2

Abstract

Eleven 17-23 years old inle patients displaying symptoms of an "epigastric pain syndrome" but without symptoms of an organic (Astrointestinal disease were examined for a period of 5-7 days. During this period concealed blood was not found in their feces. All of the patients received ved infusions of 5-400 ml of banked blood each, which was administered to them through a feeding tube, to some patients into the stomach, and ot others into the duodenum. Blood in amounts of less than 10 ml was absorbed
